

Benchmarking Programs

The Skilled Nursing Facility and Acute Care Benchmarking Surveys are open for data entry. **If you are the Foodservice Director of a Skilled Nursing or Acute Care facility, or both - this is for you!**

Your participation will award you with **one (1) general continuing education (CE) hour** for each registered survey that is completed between **March 1 - April 30, 2023**. Participants will have 24/7 access to the results and reports once they become available through their ANFP Member record.

The **Acute Care Program**, had just over 200 operators registered to participate in the survey when it closed out its third year. The Acute Care survey was built from the ground up by a five-member advisory panel working in various settings, from a small critical access hospital to a large teaching hospital, as well as representation from a supply chain company.

ANFP launched its first **Skilled Nursing Facility (SNF) Program** in March 2017 with more than 700 registered facilities and had just over 1,300 at the close of its sixth year.

Topics covered in the benchmarking programs include facility demographics, personnel information, key financial statistics, foodservice operations, nutrition information, business operations, and sanitation and safety practices. While the topics remain consistent, ANFP conducts benchmarking surveys each year so that trends and changes over time can be reported in subsequent years.

Participating in the ANFP Benchmarking Programs allows you to better understand what makes your facility successful, leading directly to an action plan, improving productivity, and gaining strategic advantage.
